

Missouri Weekly Influenza Report 2007-2008 Season¹

Missouri is reporting “Widespread” to the CDC for Week 6².

To view influenza maps click [here](#). Each map will give county data by placing the cursor over the county.

Table 1. Reported Laboratory cases by sub-type for the Week ending February 9, 2008 (Week 6)

Serogroups	A (non-typed)	A (H1)	A (H1N1)	A (H3)	B	A or B Untyped (rapid test)	Total
Week 6	1,931	0	0	11	223	774	2,939

2,926 cases by rapid non-culture diagnostic test, 11 culture confirmed type A (H3) and 2 culture confirmed type B have been reported for week 6.

**Table 2. Influenza Season-to-Date and 5-season Median by Influenza Type
Through Week Ending February 9, 2008 (Week 6)**

Influenza Type	2007-08 Season	5-Season Median	Percent Change from 5-Season Median
Influenza A	5,126	2,906	76.4%
Influenza B	627	323	94.1%
Influenza Unknown Or Untyped	1,829	1,749	4.6%
Total	7,582	4,165	82.0%

**Table 3. Influenza Season-to-Date and
5-season Median by Age Group
Through Week Ending February 9, 2008 (Week 6)**

Age Group	2007-08 Count	5-Season Median	Percent Change from 5-Season Median
00-<02	664	504	31.7%
02-04	787	481	63.6%
05-14	1,492	1,430	4.3%
15-24	1,390	425	227.1%
25-49	2,069	749	176.2%
50-64	598	282	112.1%
65+	582	361	61.2%
Total	7,582	4,165	82.0%

**Table 4. Influenza Season-to-Date and
5-season Median by Region
Through Week Ending February 9, 2008 (Week 6)**

Region	2007-08 Count	5-Season Median	Percent Change from 5-Season Median
CE	875	582	50.3%
EA	4,297	659	552.0%
NW	869	1,668	(47.9%)
SE	593	201	195.0%
SW	948	1,122	(15.5%)
Total	7,582	4,165	82.0%

**Table 5. Deaths involving Pneumonia and Influenza (P&I)
Reported During the Week Ending February 2, 2008 (Week 5)***

Week 5	Season-to-Date	Week 5 Last Season	5 Year Weekly Median
113	1181	81	111

* Beginning in Week 35 of 2003, the number of P&I deaths became based on a new system of retrieval that now includes all contributing causes of death from death certificates.

**Graph 1. Influenza 2007-08 Season-To-Date as compared to the previous 4 influenza seasons
Through the Week Ending February 9, 2008 (Week 6)**

**Table 6. Respiratory Specimens Submitted to SPHL for Viral Testing
Through the Week Ending February 9, 2008 (Week 6)***

	Positive Influenza	Total Number Specimens Submitted
Week 6	13	18
Season-to-Date	24	100

*Number positives also represent past weeks specimens submitted.

**Table 7. U.S. Influenza Sentinel Physicians Surveillance Network (USISPSN)*
Influenza-like Illness (ILI) for the Week Ending February 2, 2008 (Week 5)**

Age 0-4	Age 5-24	Age 25-64	Age 65+	Total ILI Patients Seen	Total Patients Seen	Percent ILI**
39	131	30	11	211	4300	4.90

**This is above the regional baseline percent of 1.5%

**Graph 2. Electronic Surveillance System for the Early Notification of Community-based Epidemics (ESSENCE)*
Weekly percent of ER visits with the chief complaint of Influenza-like Illness, from participating hospitals.
Through the Week Ending February 9, 2008 (Week 6)**

*To learn more about ESSENCE, view the following website: <http://www.dhss.mo.gov/ESSENCE/>

Antigenic Characterization of Missouri Influenza Isolates submitted to CDC by the State Public Health Laboratory: CDC antigenically characterizes a sample of positive Missouri influenza isolates, submitted through the Missouri Department of Health and Senior Services (DHSS), State Public Health Laboratory (SPHL). DHSS has submitted nine influenza isolates this season to CDC for antigenic characterization.

Results Received from CDC: Influenza B viruses currently circulating can be divided into two antigenically and genetically distinct lineages represented by **B/Yamagata/16/88** and **B/Victoria/2/87** viruses.

CDC has antigenically characterized one isolate so far this season from Missouri: as B/FLORIDA/04/2006-LIKE virus.

Both LAIV and TIV contain strains of influenza viruses that are antigenically equivalent to the annually recommended strains: one influenza A (H3N2) virus, one influenza A (H1N1) virus, and one influenza B virus. Each year, one or more virus strains might be changed on the basis of global surveillance for influenza viruses and the emergence and spread of new strains. Only the H1N1 strain was changed for the recommended vaccine for the 2007–08 influenza season, compared with the 2006–07 season. Viruses for both types of currently licensed vaccines are grown in eggs. Both vaccines are administered annually to provide optimal protection against influenza virus infection. Both TIV and LAIV are widely available in the United States. Although both types of vaccines are expected to be effective, the vaccines differ in several aspects.

Clusters/Outbreaks of Influenza-like Illness: Two school closings have been reported for week 6 of current season; three school closings were reported for last season. One outbreak has been reported for week 6 of the current season; no outbreaks were reported last season.

Data Sources: Laboratory-confirmed cases are reported to DHSS through the passive communicable disease surveillance system. Suspected influenza clusters and outbreaks are reported through the active surveillance system. Pneumonia and influenza deaths are reported through the DHSS Bureau of Vital Records. Influenza-like illness data by age category and total number of patient visits by week are reported voluntarily by participants in the U.S. Influenza Sentinel Physicians Surveillance Network.
